

CREATIVE SOCIETY INTERNATIONAL PROJECT

Creative Society is a volunteer, international, independent project that transcends politics and religions, aimed at uniting people's efforts around the world to combat one of the most acute problems of our time — the global climate crisis.

Mission:

to draw the attention of the international community to the problem of the global climate crisis, to study its causes, and search for ways to solve it. To create conditions for uniting the scientific potential of humanity to protect human life and prevent further climate collapse.

Participants:

representatives of different ethnic groups, occupations, social spheres, and various religious and political views from 180 countries around the world.

Funding:

This international project operates without any organized funding from governmental bodies, commercial enterprises, corporations, and/or other financial institutions.

**ACT TODAY TO PREVENT
CLIMATE CHALLENGES TOMORROW!**

creativesociety.com

The Creative Society aims to fulfill the democratic goals of the UN by initiating international research projects. Through interdisciplinary research and collective action, participants of the Creative Society project inform and unite people around the world to confront the climate crisis.

WHAT VOLUNTEERS OF THE CREATIVE SOCIETY DO:

- **Global disaster monitoring.** Volunteers monitor events related to disasters and natural calamities worldwide using open sources. Regular reports are provided to the public every week.
- **Analytics and data visualization.** In-depth analysis of climate and geodynamic events, featuring clear, informative graphs.
- **Collaboration with leading scientists and experts.** Volunteers regularly conduct interviews and interact with scientists and experts to gain deep knowledge about current climatic and geodynamic events.
- **Interaction with eyewitnesses and climate refugees.** Volunteers conduct interviews, providing a platform for disaster survivors and those facing climate challenges to share their stories.
- **Environmental analysis.** Volunteers conduct studies to assess the impact of natural disasters on the environment and ecosystems.
- **International forums and conferences.** Volunteers organize international forums and conferences, which are simultaneously interpreted into 150 languages, aimed at discussing pressing issues and finding solutions together with experts and the public.

REPORT ON THE PROGRESSION AND CONSEQUENCES OF CLIMATIC DISASTERS

In recent years, there has been a rapid increase in the number of climate disasters on the planet. Disasters occur suddenly and in areas where they were not previously observed, causing enormous damage and human losses. Currently, natural disasters show a stable trend of growth, synchronous pattern, and expanding geographic impact. This report provides an analysis of the progression of climate and geodynamic changes on Earth over the last 30 years, as well as their interrelation with additional anthropogenic factors that significantly exacerbate the climate situation on the planet. The unique data presented in this report give humanity the opportunity to evaluate the time remaining to make responsible decisions and necessary efforts to overcome the climate crisis.

This report is the result of many years of research conducted by scientists, analysts, and experts, supported by volunteers of the Creative Society project from 180 countries.

You can learn more about the report, as well as view or download its text version, on the website creativesociety.com/climate-model
